CLAIMS

Therefore, having thus described the invention, at least the following is claimed:

1	1.	For use in optical fiber connector apparatus an optical fiber containing			
2	member comprising:				
3	an	an elongated ferrule member having a longitudinal bore extending from a front			
4	end thereo	end thereof toward the rear end thereof; and			
5	a c	a clamping member within said bore for bearing against the optical fiber for fixing			
6	it in place;	it in place;			
7	the material of said clamping member comprising a shaped memory alloy (SMA).				
1	2.	The optical fiber containing member as claimed in claim 1 wherein the			
2	shaped memory alloy material is an NTA alloy.				
1	3.	The optical fiber containing member as claimed in claim 2 wherein said			
2	NT alloy is a Ti Ni alloy.				
1	4.	The optical fiber containing member as claimed in claim 1 wherein said			
2	clamping member has a primary configuration and can be stressed to a secondary or				
3	deformed configuration different from said primary configuration.				
	_				
1	5.	The optical fiber containing member as claimed in claim 4 wherein said			
2	clamping member comprises a sleeve contained within said longitudinal bore, said sleeve				
3	having an axial bore therein having a diameter in the primary configuration less than the				
4	diameter of the fiber.				
1	6.	The optical fiber containing member as claimed in claim 4 wherein said			
2	axial bore has a diameter in the secondary configuration greater than the diameter of the				
3	fiber.				

1	7. 1	The optical fiber containing member as claimed in claim 1 wherein said			
2	longitudinal bor	longitudinal bore has first and second approximately diametrically opposed hollow lobes			
3	extending along	extending along at least a portion of its length, and a at least one of said clamping			
4	members within	members within said bore.			
1	8. 7	The optical fiber containing member as claimed in claim 7 wherein said			
2	one clamping m	ember has a V-shaped configuration in the secondary configuration.			
1	9. T	The optical fiber containing member as claimed in claim 7 wherein said			
2	one clamping m	one clamping member has a planar strip primary configuration and bears against a fiber in			
3	said longitudina	said longitudinal bore to clamp it in place therein.			
1	10. T	he optical fiber containing member as claimed in claim 9 wherein the			
2	side edges of sai	d planar strip configuration are within said lobes.			
1	11. T	he optical fiber containing member as claimed in claim 8 and further			
2	having a second	having a second clamping member within said bore having a V-shaped secondary			
3	configuration wi	configuration with the open end of the V-shaped being opposite the open end of said one			
4	V-shaped clamp	V-shaped clamping member.			
1	12. T	he optical fiber containing member as claimed in claim 11 wherein said			
2	one and said sec	one and said second clamping members each has a planar strip primary configuration			
3	wherein each of	wherein each of said clamping members bears against a fiber in said longitudinal bore to			
4	clamp it in place	therein.			
1	13. T	The optical fiber containing member as claimed in claim 12 wherein the			
2	side edges of eac	h of said planar strip configuration clamping members are within said			

3

lobes.

1	14. A method of securing an optical fiber within a fiber containing member			
2	having a longitudinal bore for containing the fiber, said method comprising			
3	fabricating a first clamping member of shape memory alloy in a primary			
4	configuration;			
5	applying deforming stress to said first member to deform it to a secondary			
6	deformed configuration;			
7	inserting said deformed member in said longitudinal bore;			
8	inserting the fiber in said longitudinal bore; and			
9	treating said deformed member to return it to its primary configuration whereby it			
10	applies clamping force to the fiber.			
1	15. The method as claimed in claim 14 wherein said first clamping member,			
2	in its primary configuration, is a sleeve member having an axial bore therein, said axial			
3	bore having a diameter less than the diameter of the fiber.			
1	16. The method as claimed in claim 15 wherein the axial bore in said first			
2	sleeve member in its deformed configuration has an enlarged diameter larger than the			
3	diameter of the fiber.			
4				
4	17. The method as claimed in claim 16 and further including the step of			
5	affixing said first sleeve member in its secondary configuration within the longitudinal			
6	bore.			
1	18. The method as claimed in claim 17 and further including the step of			
2	inserting the fiber into the enlarged diametric axial bore.			
1	19. The method as claimed in claim 18 wherein the step of treating said first			
2	deformed member to return it to the primary configuration comprises applying heat			
3	thereto.			

1	20.	The method as claimed in claim 14 wherein said first clamping member is		
2	formed into a	formed into a planar strip in its primary configuration.		
1	21.	The method as alcimed: 1: 00 1 1 1 1 2 2 2		
		The method as claimed in claim 20 wherein the step of deforming said		
2	strip to a seco	strip to a secondary configuration comprises imparting a V-shape thereto and inserting it		
3	into the longitudinal bore.			
1	22.	The method as claimed in claim 21 wherein the step of treating said first		
2	and the state of t			
3	deformed member to return it to the primary configuration comprises applying heat			
3	thereto.			
1	23.	The method as claimed in claim 21 and further including the step of		
2	creating a sec	ond deformed planar strip having a V-shaped configuration and inserting it		
3		into said longitudinal bore with its open end of the V facing the open end of said first		
4		deformed member.		
1	24.	The method as claimed in claim 23 wherein the fiber is inserted into said		
2	longitudinal b	longitudinal bore between the open ends of the V-shapes of the first and second clamping		
3	members.			
1	25.	The method as claimed in claim 24 and including the step of heating both		
2	said first and	said first and second V-shaped members to return them to their primary configuration		
3		with the fiber clamped therebetween.		
_	with the fiber clamped therebetween.
